

Colocation

Colocation is a service which aims to meet the needs of content carriers, operators and providers in terms of space, energy and remote on-site activities. It provides managed, efficient, secure and reliable hosting for your equipment in strategic locations and allows our customers and their own end customers to grow remotely and in a fully-scalable manner, focusing 100% on the core of their business. Thanks to the control of the environment, backup power at critical infrastructure level and compliance with strict security standards for our locations, our customers' assets and the continuity of service are fully guaranteed. And to adapt to each need, it offers functions adapted to every market need such as various rack configurations, Hands & Eyes, equipment maintenance, etc. Specifically, the **Colocation** service from Telxius is a reliable and versatile remote service providing strategic added value to our Tier-1 backbone and underwater cables.
